Ab initio many-body calculations of single-nucleon transfer reactions with deuteron projectile [arXiv:1602.04404]

FUSTIPEN French-U.S. Theory Institute for Physics with Exotic Nuclei GANIL, Caen, France (March 14-18 2016)

#### Francesco Raimondi (University of Surrey)

In collaboration with: G. Hupin (CEA, DAM), P. Navrátil (TRIUMF), S. Quaglioni (LLNL).

## Outline

- Motivations for the study of transfer reactions and interest in <sup>7</sup>Li(*d*,p)<sup>8</sup>Li reaction
- The No-Core Shell Model with Resonating Group Method (NCSM/RGM) and with continuum (NCSMC)
- Results on <sup>7</sup>Li(d,p)<sup>8</sup>Li and <sup>7</sup>Li(d,d)<sup>7</sup>Li reactions and resonances of <sup>9</sup>Be above d-<sup>7</sup>Li threshold:
  - (Eigen)phase shifts
  - Cross sections
- Conclusions & perspectives

#### Deuteron-nucleus reaction: experimental motivations

Intense experimental activity (direct and inverse kinematics):

(*d*,p) reaction in direct kinematics

- Structure and spectroscopy of nuclei
- Nucleosynthesis and nuclear fusion applications (<sup>3</sup>H(*d*,n)<sup>4</sup>He reaction)
- Surrogate for (p/n) capture reactions
- Calibration reaction for measurement of processes of interest

#### <sup>7</sup>Li(*d*,p)<sup>8</sup>Li transfer reaction

4

### <sup>7</sup>Li(*d*,p)<sup>8</sup>Li transfer reaction

![](_page_4_Picture_1.jpeg)

Calibration reaction for astrophysical process:  ${}^{7}Li(d,p){}^{8}Li$  as target calibration for  ${}^{7}Be(p,\gamma){}^{8}B$ 

Possible mechanism of destruction of <sup>7</sup>Li in the context of baryon-inhomogeneus models of the primordial nucleosynthesis

![](_page_4_Figure_4.jpeg)

Primordial Lithium problem:

- 4-5σ discrepancy between observed and calculated (CMB+BBN) abundance of <sup>7</sup>Li
- Nuclear solution to the problem: *d*-<sup>7</sup>Li destruction mechanism is ruled out (but only in a standard BBN scenario PRC 47, 2369 1993)

Ann. Rev. Nucl. Part. Sci. 2011 61:47-68

#### No-core shell model combined with the resonating group method (NCSM-RGM) and NCSM with continuum (NCSMC)

#### No-core shell model (NCSM):

- A-nucleon wave function expansion in the harmonic-oscillator (HO) basis
- Short- and medium-range correlations
- No continuum

![](_page_5_Picture_5.jpeg)

![](_page_5_Figure_6.jpeg)

P. Navrátil at al. PRL 84, 5728 (2000)

#### NCSM+Resonating group method (NCSM-RGM):

- Microscopic approach to describe the scattering of clusters
- Long range correlations (relative motion of clusters) K. Wildermuth, Y.C. Tang A unified theory of the nucleus 1977

S. Baroni, P. Navrátil, and S. Quaglioni, PRL 110, 022505 (2013); PRC 87, 034326 (2013)

#### NCSM with continuum (NCSMC):

Variational amplitudes (unknowns of the many-body problem)

 $|T\rangle = \sum_{\lambda} c_{\lambda} \otimes c_{\lambda} + \sum_{\tilde{\nu}} \int dr \, r \, (g_{\tilde{\nu}}^{J^{*T}}(r)) \hat{A}_{\tilde{\nu}} | \otimes f_{\tilde{\nu}} \otimes f_{\tilde{\nu}} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, r' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} | \otimes f_{\tilde{\nu}'} \otimes f_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, (g_{\tilde{\nu}'}^{J^{*T}}(r')) \hat{A}_{\tilde{\nu}'} \rangle + \sum_{\tilde{\nu}'} \int dr' \, (g_{\tilde{\nu}'}^{J^{*T}}(r'$ 

![](_page_5_Picture_15.jpeg)

#### **NCSM-RGM and NCSMC equations**

$$\mathcal{H} = T_{\mathrm{rel}}(r) + \mathcal{V}_{\mathrm{rel}} + \bar{\mathcal{V}}_{\mathrm{C}}(r) + H_{(A-a)} + H_{(a)}$$
 Internal A-nucleon microscopic Hamiltonian   
Coupled-channel equations solved for the amplitude  $c_{\lambda}$  and  $g_{\nu}$   
$$\begin{pmatrix} E_{\lambda}\delta_{\lambda\lambda'} & \langle \bigotimes_{\mathsf{B}e} | \mathcal{H}\mathcal{A}_{\bar{\nu}} | \bigotimes_{\mathsf{S}_{\mathrm{L}}} \stackrel{\leftarrow}{\to} \bigotimes_{\mathsf{T}_{\mathrm{L}}} \stackrel{\leftarrow}{\to} \odot} \stackrel{\leftarrow}{\to} \odot} \stackrel{\leftarrow}{\to} \odot} \stackrel{\leftarrow}{\to} \odot \to} \overset{\leftarrow}{\to} \overset{\leftarrow}{\to} \to} \overset{\leftarrow}{\to} \to} \overset{\leftarrow}{\to} \to} \overset{\leftarrow}{\to} \to} \overset{$$

Coupled-channel microscopic *R*-matrix method on Lagrange mesh provides Scattering matrix and Asymptotic Normalization Coefficients by matching internal solution to known asymptotic M. Hesse, J.M. Sparenberg, F. Van Raemdonck, and D. Baye, Nucl Phys. A 640, 37 (1988)

Dominant partial waves above p + <sup>8</sup>Li threshold: 3/2<sup>-,+</sup>, 5/2<sup>-,+</sup>

Main phase shifts for 5/2+:

- P-wave in  $(d, {}^{7}Li)$
- Resonant S-wave in (p, <sup>8</sup>Li)

#### (p, <sup>8</sup>Li) UNcoupled NCSM-RGM calculation Phase shifts

![](_page_12_Figure_1.jpeg)

- T=3/2 resonances (1/2<sup>-</sup>, 5/2<sup>-</sup>) reproduced.
- S-wave phase shift in 5/2<sup>+</sup> strongly suppressed in NCSM-RGM calculation.
- Effects of the short-range correlations in NCSMC calculation: 1) Resonant S-wave in 5/2<sup>+</sup> enhanced; 2) P-wave in J=5/2<sup>-</sup> e T=1/2 becomes bound.

#### Model space (N<sub>max</sub>=8 $\hbar\Omega$ =20 MeV):

![](_page_12_Figure_6.jpeg)

![](_page_12_Figure_7.jpeg)

#### (p, <sup>8</sup>Li) UNcoupled NCSM-RGM calculation Phase shifts

![](_page_13_Figure_1.jpeg)

- T=3/2 resonances (1/2<sup>-</sup>, 5/2<sup>-</sup>) reproduced.
- S-wave phase shift in 5/2<sup>+</sup> strongly suppressed in NCSM-RGM calculation.
- Effects of the short-range correlations in NCSMC calculation: 1) Resonant S-wave in 5/2<sup>+</sup> enhanced; 2) P-wave in J=5/2<sup>-</sup> e T=1/2 becomes bound.

#### (*d*, <sup>7</sup>Li) UNcoupled NCSM-RGM and NCSMC calculation

![](_page_15_Figure_1.jpeg)

![](_page_15_Figure_2.jpeg)

- Dominant resonances: J=7/2<sup>-</sup> in D-wave and 5/2<sup>+</sup> in P-wave.
- Effect of the short-range correlations on J=5/2<sup>+</sup> in NCSMC calculation: Decreased width of the resonance.
- Coupling effect: Quenching of <sup>6</sup>P<sub>5/2+</sub> resonance

#### (*d*, <sup>7</sup>Li) UNcoupled NCSM-RGM and NCSMC calculation

![](_page_16_Figure_1.jpeg)

![](_page_16_Figure_2.jpeg)

- Dominant resonances: J=7/2<sup>-</sup> in D-wave and 5/2<sup>+</sup> in P-wave.
- Effect of the short-range correlations on J=5/2<sup>+</sup> in NCSMC calculation: Decreased width of the resonance.
- Coupling effect: Quenching of <sup>6</sup>P<sub>5/2+</sub> resonance

![](_page_16_Figure_6.jpeg)

# Spin-parity assignment of 0.78 MeV resonance of <sup>9</sup>Be

#### <sup>9</sup>Be spectrum above *d*-<sup>7</sup>Li threshold

![](_page_17_Figure_2.jpeg)

Low peak in the experimental total cross section: E(5/2<sup>-</sup>)~0.78 MeV above the threshold (Uncertain spin-parity assignment)

![](_page_17_Picture_4.jpeg)

## <sup>7</sup>Li(*d*,*d*)<sup>7</sup>Li cross section

![](_page_18_Figure_1.jpeg)

Experimental resonant peaks at 0.8 MeV (S-wave) and 1.0 MeV (P-wave) ('elastic' process not ideal probe for the <sup>9</sup>Be resonant states)

 Peak structure (1 MeV and 1.2 MeV) in uncoupled calculations (J=7/2<sup>-</sup> in D-wave and 5/2<sup>+</sup> in P-wave). ...shifted at higher energy (missing bare 3N? SRG parameter dependence?)

- Effect of the short-range correlations in NCSMC calculation: Increased lifetime of the resonance too narrow peaks (lack of p-<sup>8</sup>Li decay channel. other mass partition?)
- Qualitative trend of the data reproduced by NCSMC and coupled NCSM-RGM calculations ...still not-converged calculation at N<sub>max</sub>=8

### <sup>7</sup>Li(*d*,p)<sup>8</sup>Li total cross section

Included channels: (1) p, <sup>8</sup>Li (2) *d*, <sup>7</sup>Li (3) coupling (*d*,p) (4) virtual breakup of *d* 

Not-included chann

(1)<sup>8</sup>Be, n (2) <sup>6</sup>Li, t

- Position of the first resonant peak overestimated by ~ 0.33 MeV (see Q-value)
- Peak at 17.493 MeV (<sup>9</sup>Be spectrum) not reproduced (missing <sup>8</sup>Be(α-α)-n? 3N forces?)

*d*, <sup>7</sup>Li, <sup>8</sup>Li NCSM energies adjusted to reproduce the experimental Q-value of the reaction

> position of first peak slightly overestimated

els:	Channel	Exp. thresh. [MeV]	Theo.thresh. [MeV]
	d, <sup>7</sup> Li	-41.470	-40.124
	p, <sup>8</sup> Li	-41.278	-39.659
	Q-value	-0.193	-0.465

#### Impact of different partial waves on NCSM-RGM total cross section

#### <sup>7</sup>Li(*d*,p)<sup>8</sup>Li cross section

![](_page_22_Figure_2.jpeg)

- Confirmed dominant role played by 5/2<sup>+</sup> partial wave
- Below ~2 MeV the cross section is dominated by positive-parity partial waves
- Increasing trend up to deuteron break-up fairly well reproduced (contribution from 5/2<sup>-</sup> and 3/2<sup>+</sup> partial wave)

#### **Conclusions & Perspectives**

First application of the NCSM-RGM for deuteron-projectile and p-shell nucleus as target:

 Inclusion of the "elastic" and coupling channel in the description of transfer reactions

Study of the <sup>7</sup>Li(d,p)<sup>8</sup>Li transfer reaction and of the <sup>9</sup>Be resonances above d-<sup>7</sup>Li threshold:

- Discussion of the spin-parity assignment of E<sub>d</sub>=0.78 MeV resonance
- To be done:
- Complete the calculation of the <sup>7</sup>Li(d,p)<sup>8</sup>Li transfer reaction in the NCSMC framework
- Include 3N force also for p-shell nuclei
