

FUSTIPEN EXIT REPORT

George Papadimitriou

I visited GANIL from March 15, 2015 to March 21, 2015 where I participated at the workshop “New Directions for Nuclear Structure and Reaction Theories” where I presented a talk with my recent research results. The workshop was very well organized and the talks that delivered by the participants were excellent. The audience was very broad covering research areas ranging from studies of the underlying nucleon-nucleon force to many-body techniques as they are applied to light and heavy nuclei for either structure or reactions studies, and also experiment. It was a great experience for me and I am looking forward to attending the next year(s) as well.

Overall, my visit in GANIL was successful and joyful. The work with my collaborators was productive and we are expecting a publication soon based on the work that took place during my visit. I also really enjoyed the workshop that took place in GANIL; I learned new things and I had fruitful discussions with many of the participants.
